Male | 28 years old | +86 158 8949 9254 | <fanfan-feng@foxmail.com>

3 years of experience | Job target: **Frontend Developer** | Current location: **Shenzhen**

Work Experience

Senior Frontend Engineer

Lalamove (Shenzhen)

Aug 2024 – Aug 2025

- Responsible for frontend architecture design and iterative development of core business systems including **financial, warehouse, and supply chain management**.
- Led technical evolution of PC and mobile component libraries, built **CFC-Mobile** mobile component library, and developed **30+ form controls** and **5+ business Hooks**, covering **90% of mobile scenarios**.
- Conducted technical solution reviews, daily code reviews, and emergency fixes for production issues to ensure system stability.

Frontend Engineer – TikTok Live

ByteDance (Shenzhen)

Mar 2021 – Mar 2023

- Developed core systems including **live business mid-platform, campaign platforms, and critical event assurance platforms**.
- Focused on improving operational efficiency and developer experience through **componentization, tooling, and BFF architecture upgrades**.
- Led **BFF architecture refactoring** and **micro-frontend migration**, achieving unified permissions and workflow integration.

Project Experience

Lalamove – Financial Management System

Frontend Developer | Oct 2024 – Mar 2025

- Responsible for frontend architecture design and iterative development of core business systems including **financial, warehouse, and supply chain management**.
- Led the technical evolution of PC and mobile component libraries, built **CFC-Mobile**, a mobile component library, developing **30+ form controls** and **5+ business Hooks**, covering **90% of mobile scenarios**.
- Handled key technical solution reviews, daily code reviews, and emergency fixes for production issues to ensure system stability.

Achievements:

- **Reconstructed the expense reimbursement module:** Added payment methods such as **bank acceptance bills**, implemented **batch approval workflows with isolated approvals**, and integrated

PayBoss for automatic reconciliation—processed **180+ complex payment records**, reduced business error rate to **near zero**, and improved reconciliation efficiency by **~50%**.

- **Built the deposit management module from scratch**, enabling end-to-end automation from fund arrival, payment, deduction to refund; stably managed **1,000+ deposit ledgers** and **700+ suppliers**, **eliminating manual follow-up delays and errors**.
- Through deep frontend tech stack and business logic governance, delivered a **complete solution from foundational components to business logic**, **significantly enhancing team development efficiency and system stability**.
- **Reduced bugs caused by type errors by 70%** via **TypeScript migration**.
- Designed and developed **5 highly reusable PC-side business components**, improving new system development efficiency by **~30%**.

Lalamove – Warehouse Management System

Frontend Developer / Feb 2025 – May 2025

- Integrated warehouse inbound ledgers with financial month-end statements to resolve data inconsistency, long reconciliation cycles, and high communication costs between finance and warehouse teams.

Achievements:

- Enabled **automatic association** between inbound ledgers and month-end statements, supporting auto-reconciliation for complex items like **freight and penalties**, processing **2,000+ records/month**.
- Established a **bidirectional notification mechanism**, improving reconciliation efficiency by **~60%** and **significantly reducing inter-departmental communication overhead**.

Lalamove – Supply Chain Management System

Frontend Developer / Jan 2025 – Apr 2025

- Developed a **purchase order delivery timeliness monitoring and KPI management system** to address opaque delivery status, delayed statistics, and lack of early warnings.

Achievements:

- Implemented **automatic delivery status switching** and **real-time KPI comparison**, generating immediately usable statistical reports.
- Developed **order placement/delivery reminder features**, enabling procurement and management teams to **intervene promptly in overdue orders**, effectively improving **procurement management efficiency and on-time delivery rates**.

TikTok – Fusion: Live Campaign Component Platform

Frontend Developer / Mar 2022 – Mar 2023

- Core configuration platform for live campaigns using **componentization** to multiply frontend delivery capacity, covering dynamic form engines, campaign page rendering, and full operational workflows.

Achievements:

- Optimized **3 high-frequency dynamic components** out of 11 by abstracting them into a unified solution and enabling **online configuration saving**; **reduced B-end configuration code volume by 25%**, cutting development cycles from **3–5 person-days to 1–2 person-days**, achieving **~70% efficiency gain**.
- Developed **4 new components** and iterated **5 existing ones**, using **Mix (C-end)** and **Formily (B-end)**; adopted in **80% of component-based live campaigns**.
- Led the development of key features including **auto-save**, **timezone-aware time input**, **exemption workflows**, and **super admin tools**; optimized the **BFF layer** to enhance platform stability and developer experience.

TikTok – Critical Live Event Assurance Platform

Frontend Developer | Sep 2021 – Jun 2022

- Real-time monitoring and assurance platform for high-stakes live streams, integrated into TikTok's unified live business middleware, featuring data visualization, process control, risk alerts, and post-event analytics.

Achievements:

- Implemented real-time data dashboards and post-event analytics using **ECharts**; iterated on project creation forms and automated alert features.
- **Led BFF architecture refactoring** and migrated the platform as a **micro-frontend application**, achieving **unified permissions and workflow integration** with the main live campaign platform.
- Established **automated deployment pipelines**, improving release efficiency and standardization.

TikTok – Live Campaign Project Management Platform

Frontend Developer | Mar 2021 – Jun 2022

- Platform for online budget approval and resource allocation for live campaigns, built with **BFF architecture** and **complex interactive multi-state forms**.

Achievements:

- **Independently designed and delivered the MVP from 0 to 1**; now used by **most component-based campaigns** for budget and resource applications.

TikTok – Case Activity Platform

Frontend Developer | Mar 2021 – Mar 2022

- Platform enabling **one-click replication** of successful campaign templates, featuring case showcase, instant creation, and user-friendly editing.

Achievements:

- **Independently completed frontend architecture design and MVP development**; generated **15 live campaigns in the first month**, receiving **high praise from product and operations teams**.
- In later iterations, reused **Fusion platform code** to build an **interactive rule-configuration UI** for product teams, enabling **content updates without developer involvement**, **fully freeing up engineering capacity**.

Technical Skills

- **Languages:** JavaScript (**proficient**), TypeScript (**proficient**), HTML/CSS
- **Frameworks/Libraries:** React (**proficient**), UmiJS (**proficient**), Vue/Angular (**familiar**)
- **UI Libraries/Tools:** Ant Design, Semi Design, Formily, ECharts
- **Backend/Architecture:** Node.js (Koa), **BFF architecture**, **Micro-frontends**, gRPC
- **Engineering:** Webpack, Git
- **Soft Skills:** Technical design, **code review**, **cross-team collaboration**, **performance optimization**

Education

University of Nottingham | *MSc in Computer Science and Technology* | 2018 – 2020

Shenzhen University | *BEng in Software Engineering* | 2014 – 2018
